CIAN O'ROURKE

Dublin, Ireland
Portfolio | GitHub
cian.orourke@gmail.com

I'm a user-focused Software Developer who leverages modern technologies and AI-optimised workflows to deliver impactful, scalable, and intuitive end-to-end solutions. Passionate about translating business requirements into responsive, user-friendly products, I thrive in collaborative teams and continuously seek to learn, adapt, and improve.

WORK EXPERIENCE

Full-Stack Developer | Babylon | Dublin, Ireland | Dec 2025–Present

Contribute to the development and maintenance of Babylon, a platform helping international residents integrate into Irish life, by building full-stack features, integrating APIs and Firebase services, and improving code quality and development workflows using React, Next.js, and AI-assisted tools.

- Developed most of the core logic for Babylon's Community Chat Hub, implementing 1:1 and group messaging, CRUD operations, and state management.
- Implemented chat notifications, friend requests, and connection requests to support community interactions and user engagement.
- Developed and maintained 100+ production features using React and Next.js, extending platform functionality for international residents.
- Integrated Firebase services and external APIs to support messaging and shared platform functionality, collaborating with 6+ developers across 2+ teams.
- Improved development workflows through automated CI/CD pipelines, saving an estimated 30 minutes per pull request by reducing repetitive checks.
- Investigated and resolved 20+ bugs and issues through code reviews, automated quality checks, and pre-deployment testing.
- Used AI-assisted development tools to support code reviews and reduce repetitive testing, while documenting workflows and helping onboard junior developers.

INDEPENDENT PROJECTS & UPSKILLING | 2021–Present

Build practical applications to solve real-world problems, deliver client requirements, and explore emerging technologies.

Mama Amaya's | Next.js, TypeScript, Stripe

- Collaborated directly with the client to translate business requirements into a functional e-commerce website using Next.js and TypeScript.
- Implemented product browsing, ordering, and Stripe payment integration to support online sales.
- Supported the business's online presence, generating 100+ website clicks between May and October 2026.
- Designed the brand logo and product labels, creating a consistent visual identity across the website and physical products.

Open Source Model Tracker | Next.js, TypeScript, Tailwind CSS

- Built a tool to track open-source and open-weight AI models and test API endpoint availability as provider offerings change.
- Used endpoint testing to identify available models for AI-assisted coding and code reviews, helping

evaluate alternatives for development workflows.

InvoiceToSheet | Next.js, TypeScript, Google APIs

- Automated invoice data extraction and Google Sheets synchronisation, reducing manual data entry by 80%.
- Integrated OAuth 2.0 authentication and Google Workspace APIs to connect services and streamline invoice processing.

SENUS Board Report | Next.js, TypeScript, AI/LLM Integration

- Developed an SME financial reporting dashboard featuring interactive visualisations and AI-generated insights to help users interpret financial data.
- Implemented PDF data extraction with confidence scores to flag potentially unreliable values and make extracted data easier to assess.
- Integrated AI-driven analysis to help users identify financial trends and better understand business performance.

Chef de Partie | Crudo & Achara, Dublin **|** 2021 – 2025

- Optimised kitchen workflows to improve efficiency while maintaining high standards under pressure.
- Managed food ordering and inventory, ensuring effective stock control and organisation.
- Developed daily specials to enhance menu appeal and drive profitability while collaborating effectively within a fast-paced team.

TECHNICAL SKILLS

Languages: **JavaScript, TypeScript, Python, SQL, HTML, CSS**
Front-End Development: **React, Next.js, Tailwind, Bootstrap, State Management**
Back-End Development: **Django, Flask, Firebase, REST APIs**
Tools & Platforms: **Git, GitHub, Jira, Figma, Google APIs, Stripe, Github Co-Pilot, Claude, Codex**
Practices: Agile methodology, reusable components, API integration, UX-focused design, clean coding, cross-team collaboration, AI-assisted development, testing & release management

EDUCATION & CERTIFICATIONS

- Diploma in Software Development (Code Institute) 2020 (NFQ Level 6)
- AI, Web and Cloud Computing Fundamentals (IBM SkillsBuild) 2025-2026
- CS50: Introduction to Computer Science (Harvard University) 2019

HOBBIES & INTERESTS

- Build personal projects to explore modern web frameworks, responsive design, and accessible user experiences.
- Experiment with AI coding tools, CI/CD pipelines, and code-quality tools to improve development workflows.
- Mentor 6+ aspiring developers through code reviews and Scrum discussions, encouraging independent problem-solving.
- Engage with industry professionals to discuss emerging technologies and practical software engineering challenges.
- Actively contribute to GitLab's open-source ecosystem through `contributors.gitlab.com`, improving contributor resources and supporting the wider developer community.
